

## ARMORED COMMAND-RECONNAISSANCE VEHICLE FOR RECCE COMMANDER

One of four versions of command-reconnaissance vehicles is intended for surveillance of the zone of interest, in day and night and in difficult weather conditions, in order to collect intelligence through the processes of detection, identification, location and tracking of targets, using a multisensor system.

Together with belonging C2 module (communication and computer equipment for commanding), this version is equipped with remotely controlled weapon station RCWS 7,62/40 mm.

The vehicle is also equipped with diesel generator set and system independent of the electric energy supply when the main engine does not operate and with a system for air-conditioning, as well as with the system for visualization and driving in day and night.
