

THE SET OF PROTECTIVE BALLISTIC EQUIPMENT T18

The set of protective ballistic equipment T-18 is intended for ballistic protection of special forces and for carrying the parts of weapons, military equipment and resources during combat. The set enables their optimal distribution on the upper part of the body. Installed on the soldier, it ensures unhindered and fast use of all parts of weapons, military equipment and associated combat resources.

The vest is intended for protection of vital parts of the body (chest, abdomen, neck, and groin) and shoulders and upper arms from fragmentation of grenades and bombs and ordinary bullets fired from pistols (caliber up to 9 mm), submachine guns and revolvers (protection level IIIa, NIJ STD 0101.04). Protective ballistic plates from the set protect from the action of a rifle bullet of protection level IV (NIJ STD 0101.04).

In combination with the protection plates, protection level IV (NIJ STD 0101.04), in places covered by these plates, the set protects against bullets fired from automatic rifles. Protective ballistic helmet protects against cold weapons and pistol ammunition protection level "Special Type" - NIJ STD 0106.01 (reference ammunition for testing protection level IIIA, NIJ STD 0101.04). The set contains elbow and knee protectors and a plastic holster for a pistol automatically and a case for two spare magazines. The set can be used in the temperature range from -30 °C to +50 °C.

Kit weight:

- The ballistic plate ("Plate carrier") – ≤ 1.3 kg
- The helmet – ≤ 1.6 kg
- The one plate – $\leq 2,8$ kg
- The combat ballistic vests, for the largest size – $\leq 8,5$ kg
- The combat ballistic belt, for the largest size – $\leq 1,2$ kg.
