

CAMOUFLAGE KIT FOR A SNIPER M-20

Camouflage kit for a sniper M-20 is intended to increase the camouflage protection of sniper in the visible part of the electromagnetic spectrum during the implementation of combat operations, so as to provide covert movement, more difficult detection and taking a suitable firing position. The camouflage kit for the sniper M-20 is two-part and consists of a vest with hood and trousers. The front part of the suit is made of waterproof polyamide fabric that protects the soldier from the wet surface. At the back there are sewn straps on which specially processed bundles of yarn made of Nomex® fibers are placed so that the contours of the soldiers adapt to the vegetation of the environment. The secondary purpose of the sewn-on straps is to enable the use of natural vegetation for the purpose of masking. The hood on the vest is in line with the dimensions of the helmet.

The applied Nomex® fiber yarn provides resistance to burning, which provides the possibility of overcoming smaller fire obstacles.
