

CAMOUFLAGE KIT M-23

The Camouflage Kit M-23 is designed for the camouflage of personnel, armament and military equipment, and ground facilities, in the visible, near-infrared, thermal infrared, and radar "X" band regions of the electromagnetic spectrum. It is produced in two variants as the M-23 Camouflage Kit - small and the M-23 Camouflage Kit - large. Components of the camouflage kits and kits in general can be used as individual elements or by interconnecting multiple camouflage nets, or kits, masks can be created in the size and shape needed to successfully camouflage the protected object. The temperature range for the use of the cover is $-20-80^{\circ}\text{C}$.

Materials used in the production of the camouflage kit are lightweight, providing the necessary increase in camouflage protection, and the kits are easy to set up and use, easily adaptable to different terrains. The maximum height of the mask is 5 meters.
